Keywords: indicators, collaboration, partnerships, Mexico, border

The US–Mexico Border 2012 program outlines goals and objectives to improve the environmental and health conditions of the border region over a ten-year period. Due to the international scope of the program, much emphasis is placed on forging collaborative efforts and communicating pertinent information in a timely and understandable manner. With this poster, the Office of International Activities, the Office of Research and Development, and the Office of Environmental Information will describe what the program entities and partners are doing to facilitate access to and delivery of science-based indicators to decision-makers and the public. Information presented will seek to link, where possible, environmental changes to health outcomes through the use of geospatial technologies and user-friendly visualizations.
